KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

- ▶ The value of the Sub-Fund's assets may rise or fall due to normal market fluctuations and investors may not get back all of their investment.

Refer to paragraph 6 "Risks" of the Singapore Prospectus and sections 1.4 "General Risk Considerations" and 3.3 "Sub-fund specific risk considerations" of the Luxembourg Prospectus for further information on risks of the product.

MARKET AND CREDIT RISKS

- ▶ You are exposed to Foreign Exchange Risk. Changes in currency exchange rates could reduce or increase investment gains or investment losses, in some cases significantly.

- ▶ You are exposed to Interest Rate Risk. When interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality.
- ▶ You are exposed to Credit Risk. A bond or money market security could lose value if the issuer's financial health deteriorates.

LIQUIDITY RISKS

- ▶ The Sub-Fund is not listed in Singapore and there is no secondary market for its Shares. You can only redeem your investment on a Dealing Day through the Sub-Fund.
- ▶ Investment of the Sub-Fund's assets in relatively illiquid investments may restrict the ability of the Sub-Fund to dispose of its investments at a price and time that it wishes to do so. This may result in a loss to the Sub-Fund.

PRODUCT-SPECIFIC RISKS

- ▶ You are exposed to Emerging Markets Risk. Emerging markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.
- ▶ You are exposed to Derivative Risk. Financial derivative instruments may be leveraged and their prices can be very volatile. Investment in these instruments may result in losses in excess of the original amount invested. If the issuers of the derivative instruments default, or such securities or their underlying assets cannot be realized, or perform badly, investors may suffer substantial or, in certain cases, total loss of their investments. Governmental regulation and supervision of transactions on the OTC markets is generally lesser than of transactions on organised exchanges. Thus, investing in OTC derivatives involves higher counterparty risk and liquidity risk.
- ▶ You are exposed to Non-Investment Grade Debt / Unrated Debt Risk. Credit risk may be greater for Non-Investment Grade securities as they may be subject to a higher risk of default and greater price volatility.
Investment grade bonds may be subject to the risk of being downgraded to non-investment grade bonds. In the event of downgrading, the Sub-Fund's investment value in the relevant security may be adversely affected.
- ▶ You are exposed to Asset-Backed Securities (ABS) Risk. Investment in ABS entails additional risks pertaining to the underlying pool of assets (e.g. receivables) such as credit risk, interest rate risk, prepayment risk, counterparty risk and liquidity risk.
- ▶ You are exposed to Contingent Convertible Securities (CoCos) Risk. Contingent convertible securities (CoCo bonds) are comparatively untested, their income payments may be cancelled or suspended, and they are more vulnerable to losses than equities and can be highly volatile.
- ▶ You are exposed to China Interbank Bond Market Risk (CIBM). Investments in the CIBM are subject to these risks: market and liquidity risks, Chinese local credit rating risks, counterparty and settlement risk, operational risk, quasi-Government/local Government bond risk, urban investment bonds risk and regulatory risk.
